

Tyler Lewis

tylerlewisb@gmail.com • linkedin.com/in/tylew/

Engineer with experience in leading production software development and bridging technical and business domains. Skilled at translating complex goals into practical and effective solutions. Seeking a full-time position in a collaborative environment where my skills have the opportunity to drive meaningful impact.

EDUCATION

Chapman University – Orange, CA, USA

M.S. Electrical Engineering and Computer Science (in progress)

Dec 2025

B.S. Computer Science

May 2024

Minor: Business Administration

SKILLS

- | | | |
|--------------------------|----------------------|------------------------------|
| • Python | • Go | • SQL |
| • C/C++ | • Javascript + React | • Cloud Services |
| • Infrastructure as Code | • Containerization | • Communication & Leadership |
-

PROFESSIONAL EXPERIENCE

Hansji Hospitality Ventures – Irvine, CA

Lead Full-Stack Engineer

May 2024 – Present

- Serve as senior engineer and technical liaison translating Hansji's vision for an integrated hotel operations and revenue intelligence platform into a scalable, production-ready technical solution.
- Architect and maintain performant backend and user-facing infrastructure using modern full-stack patterns: publisher/subscriber messaging, microservices, relational + document databases, React, and automated CI/CD.
- Ensure data quality, real-time ingestion, analytical performance, and application security at every layer.
- Define and enforce engineering standards, ensuring maintainable codebases and predictable deployments.
- Produce architectural diagrams and documentation to communicate system design and guide expansion.

Clean Coalition – Santa Barbara, CA

Microgrid Design & Analytics Engineer

Jan 2024 – Oct 2024

- Engineered a simulation and analytics platform for the Solar Microgrid Methodology, supporting renewable and microgrid project development.
- Built models for electrical flow, energy storage, and time-of-use to analyze grid-resilient design.
- Deployed a managed platform standardizing technical evaluation and documentation workflows.
- Supervised and mentored a junior developer, ensuring maintainable, high-quality code delivery.

Continental Automotive – Carpinteria, CA

LiDAR Software Engineering Intern

May 2023 – Jan 2024

- Developed software testing suite for embedded bootloader firmware in C/C++ using GoogleTest.
- Designed precision testing rig to characterize LiDAR receiver performance under temperature extremes.
- Managed documentation and workflow in Confluence, Git, and Jira.

Electriq Power

Blockchain Developer

Jun 2022 – Nov 2022

- Developed EnergyChain, a proof-of-concept enabling peer-to-peer energy trading built on Hyperledger Fabric.
- In contribution to the IEEE Blockchain-Enabled Transactive Energy (BCTE) Initiative.
- Presented system architecture and results to the IEEE BCTE Forum (Nov 2022).

Clean Coalition – Santa Barbara, CA
Engineering Intern

Jun 2021 – Aug 2021

- Supported energy storage analysis, economic modeling, and solar array layouts for microgrid projects.

Ocean Beauty Seafoods – Naknek, AK
Quality Control Supervisor

Jun 2020 – Aug 2020

- Oversaw quality control operations at commercial salmon processing facility.
 - Ensured vendor and intake compliance with quality standards.
-

INVOLVEMENT AND LEADERSHIP

Chapman Computer Science Club

Vice President

Aug 2022–May 2024

Chapman Tutoring & Learning Center

Computer Science Tutor

Aug–Dec 2022

Provided peer support for data structures, OOP, and math.

Smart-Contract Research Fellow

May–Aug 2022

Research on blockchain smart contract viability for real-world applications.

PRESENTATIONS

T. Lewis, J. Kempf. “Energy Chain,” IEEE Blockchain Transactive Energy Initiative, Nov 9, 2022.

KEY PROJECTS

One-to-many Bluetooth Audio Broadcaster

Mar 2025

Utilized Bluetooth LE Broadcast Audio (SIG 5.2) to stream synchronized audio to multiple receivers.

Solar Microgrid Analysis Processor (SMAP)

Jan 2024

Suite of tools for analyzing and presenting energy data; deployed to support Clean Coalition microgrid sizing.

Image Colorization Deep Learning Implementation

May 2024

Implemented a PyTorch neural network predicting colors from grayscale images.

EnergyChain

Oct 2022

Hyperledger Fabric proof of concept for private residential energy exchange; presented to IEEE BCTE.

Custom FPV Drone

Apr 2022

Designed CAD frame, 3D printed with carbon fiber, implemented PID control for stabilization.
